

WE SIMPLY MAKE YOUR  
OFFICE SMARTER

thingdust supports the **measurement, analysis and optimization** of office spaces by using an all-in-one solution consisting of thingdust multisensors, an energy-saving network and the thingdust dashboard.

### THINGDUST MULTISENSOR

The thingdust multisensors are battery operated (wireless installation) and measure **movement, temperature and humidity**.

### LOW-POWER NETWORK

The LoRaWAN works **independently of the existing IT infrastructure**, offers a **high range** and results in the **long battery runtime** of the multisensors.

### SIMPLE SETUP

The thingdust multisensors are installed **quickly and easily** in rooms or under work tables. The sensor begins to measure immediately after the battery is inserted.

### THINGDUST DASHBOARD

The thingdust dashboard shows **insights** about the measured data, allows a more **detailed analysis** and the employee view shows available spaces at a glance.

thingdust enables a **proactive adaption** to the changing requirements of employees and customers and therewith the creation of a **modern, comfortable und intelligent working environment**.
